For adults, the footrest is used as a seat. In many families, even adults have their own Tripp Trap on the kitchen table. Most often, you can get away with a biannual restoration, but observe growth spurts and adjust the chair at least once a year... Take a look at our "session" "emergency" Session page The seat (fig. It is much better to have the seat too short than too deep. If you are in doubt about the height of the support for the feet, or if it cannot be adjusted to exactly the right height, it is much better to have the support for the feet a little too low than a little too high. Makes a fabulous chair. Note: It is normal that the side frames cannot be completely attached to the metal rods. This may seem strange to those of us used to conventional chairs, and the seat will probably look very short when set correctly, but the short seat depth is very important. This ensures that the seat and backplate cannot slide in normal use. Children under 36 months Baby Set: If the seat depth is adjusted correctly (that is, too short), it should be easy to lift the child in and out of the chair with the Baby Set front handrail in place. local.
